

of training sequence frequency bins;

means for performing point-by-point operations between corresponding signal sequence frequency bins and training sequence frequency bins; and

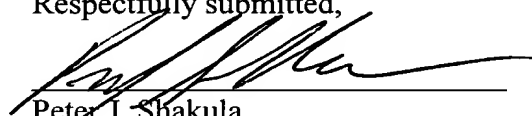

means for concatenating the point-by-point operations associated with the channel to provide a composite frequency response for the channel, the composite frequency response allowing, in the time domain, generation of the channel impulse response for the channel.

REMARKS

The above amendment is made in order to complete claim 13, which inadvertently had its text omitted when the application was filed.

Date: August 3, 2001
